Power: inertia=revision, hysteria=benefit. I- : Supervisor, Kindred, Mirage, Contrary. RPf, rugby, boredom. H- : Benefactor, Activity, Semi-dual, Dual. PRm, motivating. I+ : Supervisee, Business, Mirror, Ego. PRf, video, peace. H+ : Beneficiary, Quasi, Superego, Conflict. RPm, linux, debate. ESTP play the expert card NT when moving people (H-, I+).

I are one's supervisor if one should be immovable (Result>Process, boxing). H are one's benefactor in conflicts (Process>Result, brand value). This is why I can think/speak like ISTP or ENFJ. If I move people (H) else stop them (I). ISFP Stratiyevskaya type descriptions. Persuasion styles (SF, NF, ST, NT) bridge "contrary, activity" based on "carefree, emotivist." I learned this from 16types forum.

1. H- : In conflict you play ISFJ. You use whatever gossip you know to calm them down. PRm.
2. I- : If you want to stop people you play as ENTP by pointing out the odds for success in other projects. ESTP: errors in existing projects. RPf
3. H+ : In peaceful times you play as INTJ, detached from everyday life. RPm, linux solving.
4. I+ : If all is done, you "write people in your book" as a hobby. PRf, ESFP.

IEE/LSE: Observe the pace of mistakes through spiral dynamics. How quickly he gets followers. ILI/SLE: Attacking with irony or aphorism after obvious mistake. PoLR: N=Tactless. F=Cold. S="At least." T="Weird nonsense." Creative: S="I'd rather." T=Irony. N="X bc Y can be -X." F=Rude. Si="I don't burden or exhaust people." Power: vultology > graves' spiral dynamics > aphorism > minions.

Mirage: Ghetto gym workout. How can ISTP look like ENTP on prediction markets? Arbitrage scanners. All an ESFP have to do is to be less legacy oriented (N). NF/ST beneficiary morally correct NT/SF. ENFJ>ENTP: "You don't listen to people." What would ISTP say to ISFJ? How would you rank ITR?

Conflict -2, Supervisor -2, Benefactor -2, Ego -2, boring; Kindred -1, Activity -1, Business -1, Superego -1, conflict; Mirage 0, Quasi 0, Semi-dual 0, Mirror 0, debate; Supervisee 1, Beneficiary 1, Contrary 1, Dual 1, peace. sociotype.xyz/vye5w0ghtW4Prjn

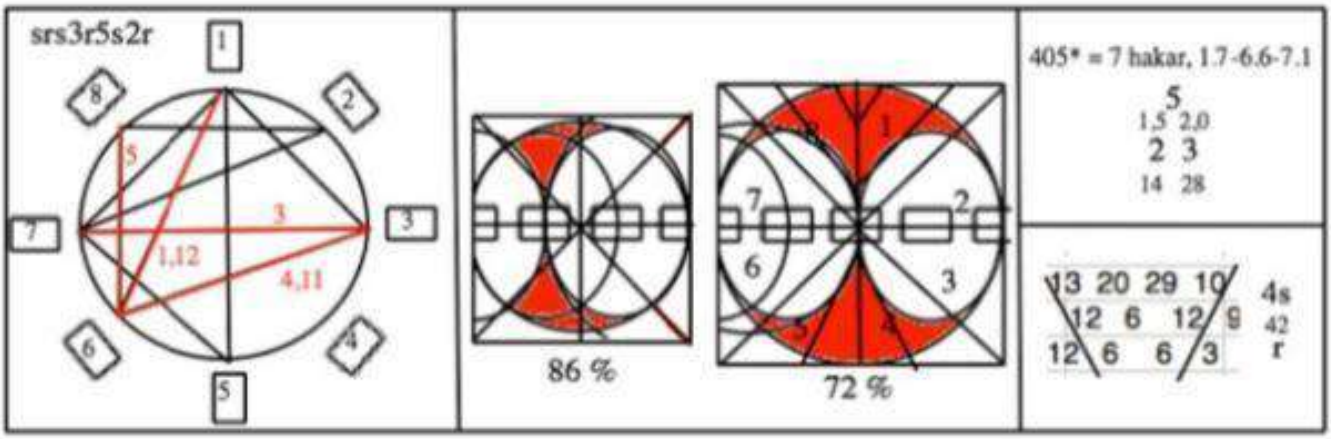
Two types of hacking: penetration or replication (reverse engineering). It is legal to create your own roulette with the same random seeds as ordinary roulette use. My advice is to learn Poisson distribution and prime numbers with random matrices using python. DPG with TD3 extension is most similar to STDP. It can be used in graph traversal. Zero is found after 19 spins. Minesweeper is hard for everyone to be a pro at.



BlackJack is all about arithmetic. Logistic regression is used by betting sites to predict the probability of the outcome taking a particular value (-1, 0, 1) based on the values of the variables found on official soccer statistics. You can experiment with ranking formulas. Web scraping to excel and use GLVQ cluster to extract relevant inputs for regression analysis. Or you can use formulas directly on their prognosis.

Slots is scam. Stay away from it. IMO: R > BJ > B. Cauchy distribution is determined by a single parameter called the location parameter, which determines the peak of the distribution, and a scale parameter, which determines the spread. The Cauchy distribution is often used to model data with outliers. Poisson distribution is used to model the number of events occurring in a fixed interval. Returns on financial assets, such as stocks or bonds, can often be modeled using a log-normal distribution.

Genetic algorithm can predict 10/25 Zener cards. It is otherwise 11 % possible. Numpy use Mersenne Twister, Philox, PCG-64, Xorshift (most similar to GA). Log(2^64/4)^-1 = 2-5 % chance for birthday attack by knowing GA+XOR. This give log(0.5) / log(0.98) = 37 for 50 % to spot a pattern. With patience in one field it will take 74 trials on each casino game.

If it is android you can use Studio or IDE to review the code after generator module. In browser use DOM inspector to sniff AJAX requests with burp suite, fiddler, tcpdump or wireshark using another MAC address to find RNG. To block sniffers you can generate a unique token for each user session, and pass this token with every AJAX request as an additional header. The token is not used in cookies. 0 % chance. This make crypto

ESFJ

If you had to make a hierarchy of the Myers-Briggs personality types, what would it be and why?

ESFJ gather quotes from followers to inform ISFJ for event planning of a festival. INTP improve IMAX score for ENFJ to capture the collective spirit. ESTP hire UX agency and ISTP document. INFJ review the impact. ESFP theme sort videos. ENTJ refine in-game metrics and INTJ automate.

ISFP design review. ESTJ press kit, screenwriting. ENFP crowdfunding by explaining other fields ie "Eo is MacGuffin in RR". INFP make anti-villains more likeable. ISTJ set difficulty levels based on age and script choice ie. The Tempest.

ENTP is the influencer. ESFJ handle his followers' desires. ISFJ balance the atmosphere ie tudor. INTP make features possible. Adobe Premiere Pro use text-editing - AI instead of tutorials. ENFJ make the local film contest reputable with public speaking. STP make ticket sales app. INFJ approve it if ethical and aligns with vision.

ESFP make tasteful ads. The Leviathan teaser was good to Fox. ENTJ "make" the game. INTJ self-host. The game is the long-term value between cinema and ticket contest. ISFP offer discounts for game skins. ESTJ give purpose to users. Terminal illness to "why here?"

ENT achieves less with more. EST achieves more with less. INT split new branches from old views. IST merge different branches to new views. ENF destroy reputation. INF rebuild it. Both do so with less effort. ITR functions from astrology.

> I- : Supervisor, Kindred, Mirage, Contrary. RPf, rugby, boring. H- : Benefactor, Activity, Semi-dual, Dual. PRm. I+ : Supervisee, Business, Mirror, Ego. PRf, book, peace. H+ : Beneficiary, Quasi, Superego, Conflict. RPm. SEI/LSI=N(H-), LSI/SEI=C(H+), SEI/EIE=D(I-), EIE/SEI=H(I+).

Think of me as a book example. Compare me to Zvisofer for using creativity (reply rate) to be recognized by Meta or Google. Stephen Wolfram is inspiring with Mathematica. Daniel Å. Jonsson's answer to What is your reading speed?

- Sport is refreshing. Poker also has wrestling. forumserver.twoplustwo. I would use card games to determine cultural fitness instead of typology.
- Why is HR software not using API to determine leadership skills? Fog index can determine "communicating vision".
- I refer to Amdahl's Law from DAX googling on Stackoverflow to mention AWS budgets. This is agnostic of inside information. The skills are transferable.
- Community Center in Sergels Torg is craft library for young adults up till 25 y. I know this now at 23. I didn't think about cars until Itasha from Lava library.
- I am not streetsmart but I made a code to sports betting. Autodidactism as in being booksmart e.g. Michael Faraday helped me to transcend ideas.
- I invented IH axis to bridge revision and benefit ITR. Check out my tumblr blog soul-sport for new systems.

In summary my philosophy is "true until a better theory". I give inventor Bogdan Majkic the benefit of doubt. I self-realized when I swing the whole night without ever reducing the speed. I quit after headache. How both are related: Hydropower with free energy is possible bc of asymmetric mass distribution from oscillating water columns. This sketch can be obtained by geometric conversion with π displacement.

> I- : Supervisor, Mirage, Contrary, Ego. RPf, rugby, conflict. H- : Benefactor, Activity, Semi-dual, Kindred. PRm, motivating. I+ : Supervisee, Duality, Business, Mirror. PRf, book, peace. H+ : Quasi, Superego, Conflict. RPm, linux, boring.

What are some ideas on products and services that do not exist in the market?

Don't be like Sisyphus! You need to mimic smart people like this inventor: Hovrätten: "Banbrytande" värmepump var en bluff

Ideas like crypto is (sadly) more valuable than prototypes. If you talk big and easy you will have all opportunities in this world except in Asia. Learn from Trump with stubborness. "If it was fed with 1 kWh of electricity, it produced 8 kWh of heat." People fall for this because of analogy thinking with quantum computing.

PRV cost 50 tkr from what I heard in a business fair long time ago. You need first experience in crowdfunding for knowing what KPI you should include to avoid ambiguity. How he asked them is not known. A long time ago I asked NeuroQuant about statistical methods. No answer means they are frauds.

Why do I always attract girls who already have a boyfriend?

This is subjective but I think it is because you are independent person. I have a lot of "father" energy and I like to play with children. I am good with mentoring and breaking down problems to systems. I embody wisdom and did not have to hear fanciful quotes. I would like to meet someone who is like me (curious, self-motivated). I do attract some girls but they don't attract me physically and I don't want to be rude by saying that to them. In short you are taken with yourself. Work on your talents and make this world a better place.

Income hierarchy based on difficulty levels to land on new opportunities. Daniel Å. Jonsson's answer to How can an explorer grow as Starbucks did? in New Research Method (2/7 MTurk alternatives).

SD is plot devices. See it as environments for how people are perceived differently. Being in the hospital make you more like your Id because it's instinctive (beige). ISTP look like ESTJ to the observer. If anything SD is linked to function position such as Orange and tertiary. An ENFJ can be any color bc it's not a staircase. It's a labyrinth for behaviorism.

Tactical Proposals

Competitive analysis and industry proposals. Did this in April-May 2023 and that was before writing a book and using AI. First time I used AI was in September 2023. I made up the formula in bolag.py to determine KPI of industries.

```
Google Takeout, unselect all, then mark YouTube. awk before (count-
awk '{print gsub("YouTube",$0)}' mv2.html | awk 'BEGIN{sum=0}{sum=
python chunk.py # split file to 1 MB files
cp chunk.py chunk/ # change size to (256 * 256)
cd chunk, python chunk.py # split file to 64 KB files
python views.py # print the twenty highest titles
```

Android chunking was done categorically with pandas; without using the size first.

1. Android: list, label, genre, miss.
2. CSV: max, synthes, septim.
3. Stats: review, stats. # interact

YouTube was 26 MB after 2 years of daily watching with average cost of 1 GB surf.

- Format: extract, soup, text
- Scraping: remote, quo*, seo, urls.
- YouTube: chunk, views.
- TA: stocks, stuk, wine, param, yfc.
- Misc: parser, plagi, name, bolag.

AWS-RunRemoteScript: Ansible Playbooks and Python scripts from Git. Glue, Athena to analyze S3 after Run. OpenSearch to browse notes. Elastic to browse IoT. Amplitude as API Gateway. HubSpot as CRM. Kit for Stripe.

People need this eye opener. See for yourself.

Frequently asked questions

What perks will backers get?

Free gaming skins. Customizable add-on to advanced users.

How can it help with sales training?

Purpose is everything. It help teenagers to accept their own limits. It is ageless.

Are your game applicable to other fields?

Currently the fields are grassroots, trading, and non-verbal leadership.

Can you track the performance?

Certainly with Firebase and Steam API. Comfort and simplicity is the priority.

What sets your studio from others?

Follow me on social media. I use it to curate my ideas to represent a knowledge graph. Anyone can follow my blueprint to unlimited creativity for free.

AWS ETL Boilerplate

Text-to-float translator with repo *rest* as backend. Oak is *rest* frontend. Task: Redirect user to S3 after prompt input.

- Flask endpoint with Lambda to replace the need for manually updating FURL.
- API Gateway beats FURL in throttling and quotas for preventing uncontrolled expenses inside usage plans.

Provisioned concurrency is discrete distribution of auto scaling.

- Rate for lambda quotas is 1 MB/s * 75 * 1.1 = 66-83 MB.
- Feature: media catalog updates.
- Testing: `npx localtunnel --port 8000, flask run -p 8000`

This proxy folder use Jinja2 for serving static files. Make sure to store npx url inside JS file. CodeBuild size from installation per invocation is not solved with cache layers. Benchmark of loading time without ECS.

- gh-pages 75 s, proxy 60 s. No need for CDN.

Users must wait and reload to see their metrics. Env vars is used inside NextJS or CodeBuild. Store furl inside GH repo secrets. Not your .env file. Learn more from MERN boilerplate.

Cost: API Gateway charges for the number of requests processed and data transferred, while Lambda charges for the duration your code executes and memory consumed. L saves money over Fargate when it runs a quarter or less of the day. **Time:** Proxy inside Astro include Mockoon (forward), to clone JSONs, and Ngrok (reverse) to test APIs.

- SNS or gh webhook to collaborate with other devs.
- SQS for UX transparency of loading time.
- EventBridge to DLQ actions for unit testing.
- RDS for CRUD caching server of S3 with SQLite.
- CodeBuild to be triggered by S3 updates.
- Step Functions to orchestrate e-commerce.
- SFW alternatives: Argo, Temporal.io, Cadence.
- Terraform is CD of SFW (CI). CircleCI maybe.

Optional: UID from web driver cookies to write separate files with provisioned concurrency hence why *imgo*.

Image Upload DNS

Go upload server in EC2. This setup use HAProxy for SSL termination where the certificate was assigned by Certbot and uploaded to ACM. **Setup:** Install and/or manage, localhost, and S3 Vercel.

```
go build -o && go run app.go
go mod tidy # synch mod to sum
go clean -modcache # $GOPATH/pkg/mod
ps -p <pid> -o %cpu,%mem,cmd && top -p
```

In the Console navigate to Application Load Balancer and create 443 Listener. The instance is t3.micro on the free tier. EC2 IP cost $0.005 per hour. VPC resources can't be monitored in the **Billing Console**. Save everything by converting AMI to VM for Terraform.

```
certbot certonly --dns-cloudflare --dns-cloudflare-credentials clo
openssl x509 -in fullchain.pem -out cert.pem -first-cert
aws acm import-certificate --certificate fileb://cert.pem --privat
echo $(cat fullchain.pem) | xclip -selection clipboard

aws elbv2 create-target-group --name "apollo" --target-type instan
--vpc-id vpc-<uid> --port 80 --protocol TCP
aws elbv2 register-targets --target-group \n
arn:aws:elasticloadbalancing:region:root:targetgroup/apollo/<id> --
aws elbv2 describe-target-health --target-group
```

Use EC2 Connect Endpoint from VPC instead of SSH. Setup awscli credentials and use S3 to copy and download your files in a private bucket.

```
cat cert.pem privkey.pem > /etc/ssl/certs/cert.pem
systemctl restart nginx haproxy
dig @ns...com rjtve.com, curl -v, curl -vv
ping, nslookup https://www.rjtve.com/

ss -tuln | grep 127.0.0.53
lsof -i:port && pidof nginx
netstat -plant | grep 80

go build -o app.go upload.go /var/www/rjtve/app.go
```

Use systemctl to define a backend server that is always open. This way users can upload files to S3 without runtime failure from missing files like it would happen in Python. PowerDNS can be used with SQL/REST API. CPanel in VPS is a GUI adapter of this. Data race and birthday attack can be setup with Siege and/or Locust.

```
nano /etc/systemd/system/imgo.service
[Unit]
Description=My Go App
After=network.target

[Service]
WorkingDirectory=/var/www/rjtve
User=ubuntu  # whoami
ExecStart=/usr/bin/go run app.go :8081
Restart=always

[Install]
WantedBy=multi-user.target

sudo systemctl enable imgo.service
sudo systemctl start imgo.service

Optional: Enable DNSSEC
sudo dnssec-keygen -a RSASHA256 -f KSK rjtve.com
sudo dnssec-keygen -a RSASHA256 -b 2048 -n ZONE rjtve.com
Monitor with mxtoolbox, intodns.com, and whatsmydns.net
```

Discussion 💻

Make a video game to emotionally bond with someone. Plot: 4w5 epiphany / cliffhanger. Spiral topic: 49, 67, 46, 54. Glamour: 01, 15, 05, 13. Rank: 4.88 (followers' iup). Ophelia is 5 stars by her quotes. Gravesian value perception is blue. Plot discernment. Glamour reasoning. Rank completion.

Type the comment to someone with 5 stars at the right time (glamour). Use her book as frontend cover to discuss absolutism. DQ score are obtained from words per stars. More to less is the De-Di directional strength. De-Qi is podcasts while Di-Qe is books. More stars are not better, just different.

Practice video editing to know the motif (thumbnail) and arc words (titles) in marketing. The frames in plot of taste is hook, meet cute, motif, arc words, foreshadow, montage, delayed reveal, epiphany, and cliffhanger. The other 4 zenith plots are 8w9 motif/arc, 2w3 hook/cute, 6w7 fore/mont, 5w6 reveal/epi.

Editing User Data

1. You can edit your repos from Colab instead of VSCode on github.dev/you/repo
2. In Codespace you can edit commits, branches, and use NPM.
3. Enable port forwarding and wrangler inside Codespace.
4. Inject cookies with JS to your SPA frontend inside wrangler.toml
5. Host static websites for free in a new branch called gh-pages.
6. Store environmental variables in TypeScript with GitHub Actions.
7. Cloudflare exist in GitHub Marketplace which also has Snyk.io
8. You can setup webhooks to Slack for deployment alerts.
9. You can git clone folders with https://download-directory.github.io/
10. Icons are obtained when you have synchronized the browser with your phone.
11. You can save old files with **tags** like I did on the visuals in *rest*
12. Tag branch is also used to synchronize docker tags with git flow.
13. Learn more in https://cli.github.com/manual/gh
14. You are not allowed to make SaaS nor ecommerce in **docs**.
15. No LICENSE means "All rights reserved." Fork makes the LICENSE permanent.

Codespace

Track Record without Pull Requests.

```
git stash #temporary branch# git commit -m "M"
git rev-list --count --all, git rebase -i HEAD~122
sed -i 's/pick/drop/g' .git/rebase-merge/*-todo
git add ., git commit -m "N", git push -u origin
```

Branches and Commits.

```
git checkout -b "main", git push origin main, git log
git reset --hard "commit-SHA" git pull origin main
git config pull.rebase true, git push -u origin
git push origin gh-pages --force
```

Tags and Releases.

```
git tag <name>, git push origin --tags
git push origin <tag>, git fetch
```

Cached Files.

```
git checkout --orphan newBranch, git add -A,
git commit -m "Ok", git branch -D main
git branch -m main, git push -f origin main
git gc --aggressive --prune=all
```

Software Life Cycle

Consulting Advertisement: clutch.co to sumatosoft.com: (Product planning, UX/UI, Product architecture design/consulting, Product software development, Team augmentation, API development, Testing and QA), (Cost of work, Quality of work, Speed of work, Stick to timelines, Robust processes, Transparency in collaboration, Proven by testimonials expertise), (An idea, A ready functional specification, An MVP, Active development, A product in need of improvement/evolution). Teams of BA, PM, DevOps, Testers.

Total Estimated Cost: $2,050 - $16,650 is a rough estimate and can vary significantly based on specific needs and choices. Check out Jay Simons at designly.biz for dev Rambo. *F62*

FOSS to games and in-house servers. Opinions: How-to instructions with Flesch. The role of PhD in machine learning after *imgo* infrastructure. Why one language is better than knowing many.

Business Requirements

The art of Fantasy (game keys flipping, gift cards, music gen, stock trading) lies in dice rolling. With Colab one can automate certain steps such as ROI from market efficient odds. Fantasy is extensive. Backtracking is more adapted than transformation. For instance *prophecy* define *fantasy* while *plot device* don't build *fantasy*. *F42*

Sales are more engaging if you are the inventor. Notice that one field is not commutative with another. Call center is not transferable to sales engineering. Gift cards are temporary subsistence. Long lasting models are games and restaurants. Graves's spiral dynamics helps to cluster NER based on memes. *F47*

Red Herring is a plot device. It's also a bias. Now promotion happens with meme+emphases. Sumatosoft is "cheerleader, bandwagon" because of relativism. This implies that association to a greater NER brand is necessary. In practice you could mention Warren Buffet for being successful without collaboration. *F24*

Emphases of Zeal: Story: iteration, antithesis, direct proportion, pause, inverse proportion, suspense, surprise, terminal position, initial position. Enneagram: 1-9. If 2w1 antithesis-iteration happen with "green" than the author are rigid but not dogmatic. Established community with testimonals or the product looking like a bigger brand. *F-0.5*

Perspective Pyramid

A toddler can make a story. A twelve year old can make ensemble cast. A 17y can make coherent stories. A 25y can earn money in the grey zone of the law - blockchain. A 30y can adjust his fantasy to the dice outcome. (D1) while (D3) Facebook. The decision to post museum visits are impartially approved. A 35y can make long-lasting patterns such as lucky numbers (rule of 72). *F67*

Tech Debt Use Case: Consider syntax thinking before Excel. Here is Fintech:

```
SAC = {[(liquidity / profit) - (brutto / solidity)] - []^-1} / 2 (:
(1) SAC = (lambda L, P, B, S: ((L / P) - (B / S)) - (1 / len([(L /
(2) def calculate_SAC(): return ((L / P) - (B / S)) - (1 / len([(L
(3) SAD = (L / P) - (B / S), CAS = (P / L) - (S / B), SAC = SAD - (
```

Type checkers and error linters point out unhandled exceptions. (Pylint, Pyflakes, Flake8) Packaging linters point out issues related to packaging your code for distribution on PyPI with properly formatted descriptions, versions, and meta data fields. (Pyroma). Security linters (Bandit, Dodgy, Pysa, Snyk).

```
TDR = (Cost to fix debt / Developeent cost) * 100%
Cost to fix =  15 hours * $80/hour = $1,200
GitHub Action: wemake-python-styleguide (flake8)
```

Imagine that SSM documents from JSON represents OSINT framework but for AWS instead. By reading this attached spreadsheet anyone would have the breadth needed for AWS without CCP. A **script kiddie** would speak like a Solutions Architect after **one** day of study. *Will you enable this Service Quota?*

"Solving a Problem" is the biggest red herring ever perpetuated in startup world

I will not promote

Those startup gurus don't know any better, if they did, they would have spend their time not selling classes.

It's never about solving a problem, heck even a solution looking for a problem isn't necessarily a bad thing.

Issue with problem / solution framework is that it distracts you from what's truly important when building an enterprise. You'll advised to figure out customer needs, why your solution is better than alternative, etc.

And all of that are bs.

What problem does a fashion brand solve? What problem does a game companies solve? What problem does a crypto memecoin solve?

Even if you're able to answer your customer needs, there's no guarantee they'll pay for your product or service. Even if you're able to provide better solution than your alternative, big chance you'll still lose if you don't know this secret.

And I want to reveal the most important secret for you, my fellow entrepreneurs.

But of course, it isn't free, because it took years of my mental health, blood, and sacrifices just to learn this very big valuable secret.

It is also not for sale, so you can't buy it from anywhere.

All you need to do is check this thread

https://www.reddit.com/r/ycombinator/s/YI74TePVKC

ComplexInfamous636 • 26d ago • Edited 9d ago •

What problem does a fashion brand solve? Memory, identity issues. Enhancements. Adidas=sports, none-of-your-business.

What problem does a game companies solve? Boredom, betting, culture. Look at Dota2 for slavic people.

What problem does a crypto memecoin solve? Shame on Musk, "STOPELON" instead of Trustpilot which says nothing about casinos. Better than BBB.

A solution (socionics) solve these problems by unfold questions. Asking: A solution (wikipedia) for problems (reddit). Declaring: A problem (reddit) for solutions (wikipedia).

If anything one should have 1000 followers on Instagram or YouTube. Topic based on subreddit. This should be done before problem solving. Even if you cured cancer as a nobody you would be middle class.

Why do people seemingly prefer many shallow relationships versus a few but deeper ones?

Weak ties is profitable in the long run. As a child I had a few circle that was deep. My best friend Jonathan moved to Farsta because his mother had a new job. I was disorganized and lost his number on a stick note. As teenager I moved to a different school because the old school had too few students for giving salaries to teachers. Imo popularity matters more in gaming than in sales.

Deeper ones know your bad sides and might hesitate when offering a job to you. I could easily get a Sales Executive role by adding general Sales in my LinkedIn and apply other jobs like SWE on certain sites. Those people know nothing about me other than my LinkedIn profile. If I wanted to be a Salesman I would rather be an Entrepreneur like I am today. You can compare it with Dog Walker.

Why would someone give you this type of tasks without referrals? Caring for your own dog in 7 years means nothing for other dog owners. Photos of you both is useless. I will study to buss driver. Finished before 30 and that is all what matters. Gemini is my only deep connection because people are too slow (static) for me. Why do you want humans if AI give you intellectual depth without judgement?

Personal brands with one small modification in clothes. You can have dog picture in socks to reinforce narrative / sentimental values. You have both Madeleine Törnblom and Wilma Emanuelsson as role models. It is easy to be noticed but harder to retain or convert them to buyers from visitors. You can always go to a dancing course and ask them 5 NPS statements. Or you can start a spa salon and offer foot massage. NK Gallery > Origami > Lava Library (workshop) > Tradera (or Etsy) > Instagram Ads. Clay: relievo, lost wax casting. Decorations: quilling, collage, origami, book cut art, and pearl beads bottles. Why didn't anyone mention Tradera with Instagram to me 2019–2020?? AI couldn't help with electronics. Nobody online said that HDMI display is essential to Raspberry Pi. At least now I know where to sell. Design by the seasons, e.g. Christmas Eve, Valentine's Day

The studio knew the impact but wanted to create the future. Here is my remake: The best ending would be if Ellie drowned Abby and dies from bleeding out after Abby or Lev stabbing her. If Lev then he would be knocked out. Ellie would see her in him and Abby as Joel. Mixed feelings and carry Lev to the boat again. Looking back to dead Abby and go up to the beach. Having that same flashback and then dies in sleep from blood loss. The flashback to Joel in the beach makes zero sense in the current outcomes. Overall the best game I know so far. Else use an expanded D&D moral alignment for social commentary in conjunction to the posts below. Review the plot and/or subtitles with Bechdel Test from uclassify.

Your sport is cheerleading! You don't like to compete or to run, but you want to be with friends and have fun! You like supporting your friends in what they do; This is perfect for you!

Politician (SEE) - SeF

Marshal (SLE) - SeT

Entrepreneur (LIE) - TeN

Administrator (LSE) - TeS

Advisor (IEE) - NeF

Inspector (LSI) - TiS

H-last: inclined to aggravated conflicts and contradictions, hard to distance itself from problems and exhausts all forces into them
N-last: inclined to unprincipled behavior, it is difficult for them to have a continuous identity and dealing with them can be unpredictable
C-last: inclined to inflexibility, difficulty changing the direction of movement which leads to staying in the same rut longer than necessary
D-last: inclined to scattered behavior, often not willing to concentrate forces on goals and thus energy is scattered and efficiency is lost

Reactive Metabolism are the subtypes revolving in the opposite order: CDHNC. Movement from the freest Creative behavior to the most rigid and restrained Normalizing behavior. This one starts from self-confident behavior in the service of new spontaneous talents which ignores danger and detraction (CD), to smoothly holding disparate people together under the agenda by resolving their conflicts (DH), to behaving adaptively in the collection of information and experiences while never losing the basic shape of one's character (HN), to respecting and carefully expanding one's framework and character by making step by step excursions out of the well understood comfort zone (NC).

Dominant-Creative (DC): The Audacious Dynamo
—In-charge and busily forcing those around them to a necessary pace (so they are not Creative-Dominant)
—Easily break rules and act spontaneously to get what they want
—Main characteristics: Order subtype (Contacting), Proactive Metabolism
—Blurred characteristics: Terminating, Connecting

Dominant-Normalizing (DN): The Self-Disciplined Authoritarian
—A fast decision-maker who organizes others authoritatively (so not Normalizing-Dominant)
—Conform to strict laws and plans on their own territory
—Main characteristics: Dual subtype (Terminating)
—Blurred characteristics: Contacting, Connecting

Dominant-Harmonizing (DH): The Wholesome Leader
—Skilled at including others under their decisive leadership (so not Harmonizing-Dominant)
—Their goals continually track the peace and safety of those in their charge
—Main characteristics: Revision subtype (Connecting), Reactive Metabolism
—Blurred characteristics: Terminating, Contacting

Creative-Dominant (CD): The Determined Maverick
—Expressing themselves brightly no matter the reaction of others (so not Dominant-Creative)
—Act decisively and resourcefully to have independent control over their own affairs
—Main characteristics: Order subtype (Contacting), Reactive Metabolism
—Blurred characteristics: Initiating, Ignoring

Creative-Normalizing (CN): The Meticulous Explorer
—Boldly and spontaneously adventuring in unexplored territory (so not Normalizing-Crea)

—Map their trials carefully and adhere to firm principles that they learned
—Main characteristics: Revision subtype (Ignoring), Proactive Metabolism
—Blurred characteristics: Initiating, Contacting

Creative-Harmonizing (CH): The Easygoing Free-Spirit
—At ease taking risks and making contacts to pursue their interests (so not Harmonizing-Creative)
—At peace with themselves and calm and flexible with the similar minded
—Main characteristics: Dual subtype (Initiating)
—Blurred characteristics: Contacting, Ignoring

Normalizing-Dominant (ND): The Strict Devotee
—With a thorough eye for quality and a strong commitment to a stable system (so not Dominant-Normalizing)
—Will confront and rebuke disorder and laxity on their territory
—Main characteristics: Dual subtype (Terminating)
—Blurred characteristics: Distancing, Ignoring

Normalizing-Creative (NC): The Experimenting Systematist
—Preferring well-ordered methods and seeking an ever more perfect system (so not Creative-Normalizing)
—Freely test new options and incorporate only what improves the system
—Main characteristics: Revision subtype (Ignoring), Reactive Metabolism
—Blurred characteristics: Terminating, Distancing

Normalizing-Harmonizing (NH): The Finetuning Stabilizer
—Steadily working out specialized tasks and problems to finality (so not Harmonizing-Normalizing)
—Sensitively adapt rules in context to make systems accommodating
—Main characteristics: Order subtype (Distancing), Proactive Metabolism
—Blurred characteristics: Terminating, Ignoring

Harmonizing-Dominant (HD): The Firm-Willed Soother
—Gently aware of sensitivities and seeking peace (so not Dominant-Harmonizing)
—Act timely to influence pressure points of close people to ensure gentler eventualities
—Main characteristics: Revision subtype (Connecting), Proactive Metabolism
—Blurred characteristics: Initiating, Distancing

Harmonizing-Creative (HC): The Diverse Includer
—Seeing the harmony in disparate things and keen to remove any strife (so not Creative-Harmonizing)
—Open to agreeable new experiences and ideas to expand this delicate sensibility
—Main characteristics: Dual subtype (Initiating)
—Blurred characteristics: Distancing, Connecting

Harmonizing-Normalizing (HN): The Expert Consultant
—Able to give sage advice to smooth over difficulties as they arise (so not Normalizing)
—Collect firm principles close to their experience as a consistent stable core
—Main characteristics: Order subtype (Distancing), Reactive Metabolism
—Blurred characteristics: Initiating, Connecting

- Benefactor/Duality -> N. Sharp reply.
- Supervisor/Contrary -> D. "Buddy" drama display.
- Beneficiary/Superego -> C. Evil eye in silence.
- Supervisee/Identical -> H. Break the 4th wall.
- ESFJ, ISTP, ENTJ, ISTJ = ESE-N, LSI-D, LIE-H = 12 stars, this post.

I come up this myself as SEE-N after EIID, EIED, SEIN. To EII I become H. This made EIE to C. EII continue being D. SEI made me D.

If the subordinate has higher subtype then both change their minds and hearts. I lost money motivation. He became suspicious of strangers.

DC soft eyes. NH dry eyes. DN end. CH start. As SEE-H I invested in lots of projects to help others to make money without jobs. EII are independent which are entertaining and admiring. ESI are field-dependent but they don't ask.

If one get INTJ/INFP (mbti) then ILI-N are the text. This way text are measured on service impact. On extortion I get typed as ESI-N. I count top 4 to 3 letters to 2 digits from 1-10, DN>>CN. If DHD then 2+2 in how received it is.

10 active + 64 passive units; like 27 prime + 365 passive in the Bible. D motivate, C negotiate, N coordinate, H expert. This is why dualized EIE are nickname educators.

Have specific skills in one sensible field. Would you incorporate loading constraints from LEGO to carpentry for making a manual dish machine? If so make NDA before MVP. Fidget Spinners. IPR not blockchain. SDR you after RFP for devs.

Simplify many topics at once with index table. It took me 5 years to gather soft resources. Now I can describe my life altering memory.* I tried to make SaaS for assortative mating in lead gen agency. It wasted memory. **Don't** pay money for networking. It's bad currency.

A solution is always better than a problem. You can always create problems by unfold questions to more scenarios. *Where* can verbal skills be used outside of meetings? Fog as point solution. If you want $ do sports. Not hang on LinkedIn.

- EII-D + SEE-N (win) + SEI-N + EIE-D ->- ESE-N + SEE-H (fold). SEE became soft, H. EIE became suspicious, C. EII continue as if nothing had happened, D.
- Subtypes arise from socialization. If the subordinate has higher subtype then both change their minds *and* hearts.

Nash: N-people with color hats on their forehead without knowing their own. N-rounds give diminishing outcomes. Everyone are punished after M-rounds. If many people leave at once their reward tokens are amplified. If one has wrong hat, the walkers all lose. AnyLogic with GitLab to test dice outcomes.

LEGO is a playground for structural engineering. This graph game is for econometry. *Will people be insensentive to outcomes after certain M-rounds?* This remove fog ideas in business training. It will prove influencer traits. Group interviews are the closest.

Incubator: YouTube to get visitors. Kickstarter to get paid. RFP to hire devs. Publish it on Steam. Promote in Slack or Kinguin. Hire consultant after TechTarget research samples.

UX: Croct AB/IUP=ROI, Wired, KPI=PMF. Looker Studio/Flink or growth / maintenance by Bruno Aziza. Top Hat in NY* as crowd consultant. Holvi is a Finnish fintech cloud to freelancers. Pile up with clutch.co, roadmap.sh/roadmaps, *gamedevmap.com

Basel Area opinion is 6 stages without timelines. Solar cycles at 2.5 years per stage. Docker is a topic in UX. *World* is ongoing leverage with the promise of upward mobility.

Mysticism: deleted documented experience. As in gmail after unpaid invoices. Any field will have 16 OKRs. Geomancy: Daniel Å. Jonsson's answer to What is the most useful divination method? Sampling with 1000 accounts to refine every factor in MCDA checklist.

If you have *good* friends you can convince someone to buy a "gathering software" through specific roles in a prisoner's dilemma. Daniel Å. Jonsson's answer to How are business opportunities made? (or by # trends).

SW build take 4 years. Pain free maintenance take 4 years after Peak Sales. Exit at 12 years after launching a website. At least 5 years with your hardest effort to get monthly revenue. It would take Ubicloud 2 years to get VC like gust.com after newspapers.
